PRPrompt

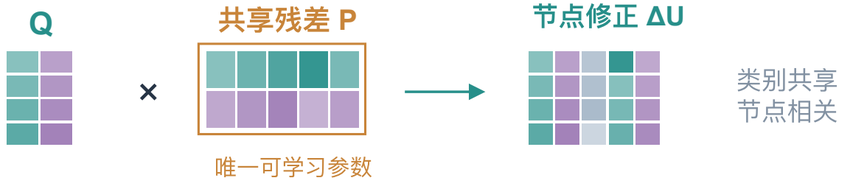

原型路由图提示

M1 原型路由与共享残差

支持类别确定组合条件，P 学习修正内容

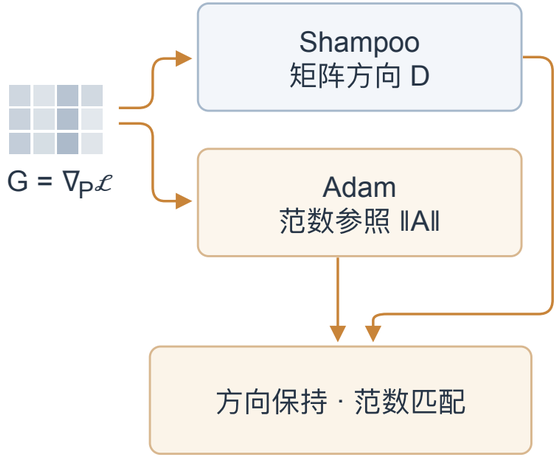

$$\Delta U = \gamma\,[Q \tanh(P)] \odot s_U$$

M2 矩阵更新

同一梯度，分开确定方向与步幅

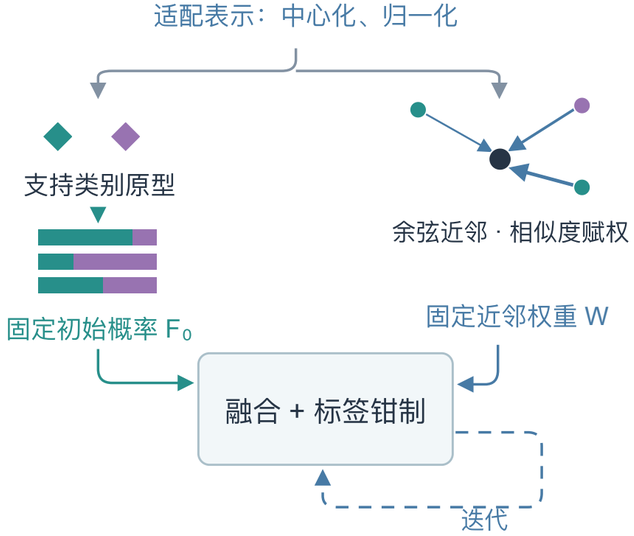

$$\tilde{D} = D \cdot \|A\|_F / (\|D\|_F + \varepsilon)$$

$$P \leftarrow P - \eta \tilde{D}$$

M3 支持约束读出

最终表示固定，仅迭代类别概率

$$F \leftarrow (1-\alpha)F_0 + \alpha W F\ ;\ F_S \leftarrow Y_S$$
